Falcon Communications, Inc. Signs on as New Intelsat AmpiageSM Distributor in U.S.

Pembroke, Bermuda, June 5, 2006 - Intelsat today announced that Falcon Communications, Inc., a provider of integrated services to U.S.-operated telecommunications companies (telcos), has signed an agreement with Intelsat to distribute Ampiage, Intelsat's satellite-based MPEG-4 video, open-architecture, transport service, to telcos and other multichannel system operators in North America.

Falcon Communications will distribute Ampiage to the approximately 800 U.S. telcos it currently serves, offering them an entry point into the IPTV, MPEG-4 and triple play markets. Ampiage, which centralizes the aggregation, processing and distribution of fully digital audio and video content from the U.S., enables telcos to bundle an attractive standard and high definition programming package with voice and broadband services without incurring significant upgrade or start-up costs.

Donald Cook, CEO of Falcon Communications, stated, "Distributing Ampiage is an avenue for us to offer our large customer base enhanced value and new opportunities, all at significant cost-savings and maximum flexibility with regard to equipment and services. As an even bigger value-add, we have a fully-integrated, tested and pre-configured MPEG-4 end-to-end system, from Intelsat's satellite through to the set top box, which we can deliver, install and maintain for those operators who need it."

"Both Falcon Communications and Intelsat have decades of experience serving telco customers, in the U.S. or abroad, which gives us both a unique understanding of this customer set, as well as the risks and challenges their businesses face," said Stephen Spengler, Intelsat's Senior Vice President, Sales and Marketing. "The convergence of technology is opening new doors for traditional telcos and is putting pressure on them to offer more value to consumers, including video content, in order to effectively grow and compete. Falcon Communications can offer that value to them through the use of Ampiage, which is a cost-effective catalyst to their video market entry."

Intelsat expects Ampiage to be commercially available starting this summer.

About Intelsat

Intelsat is a global communications provider offering flexible and secure services to customers in over 200 countries and territories. Intelsat has maintained a leadership position for over 40 years by distributing video, voice, and data for television and content providers, government and military entities, major corporations, telecommunications carriers, and Internet service providers.
