Intelsat operates the world’s first Globalized Network, delivering high-quality, cost-effective video and broadband services anywhere in the world. Intelsat’s Globalized Network combines the world’s largest satellite backbone with terrestrial infrastructure, managed services and an open, interoperable architecture to enable customers to drive revenue and reach through a new generation of network services. Thousands of organizations serving billions of people worldwide rely on Intelsat to provide ubiquitous broadband connectivity, multi-format video broadcasting, secure satellite communications and seamless mobility services. The end result is an entirely new world, one that allows us to envision the impossible, connect without boundaries and transform the ways in which we live.

Simple, Seamless and Secure Broadband Service Across Geographies
Discover a True Broadband Maritime Solution

In the maritime sector, the demands for broadband connectivity are exploding. Routes are continually evolving. Operational, regulatory, passenger and crew requirements are putting added pressure on ship operators to provide reliable service throughout a vessel’s entire journey. Applications that monitor ship performance and keep charts updated are dramatically increasing bandwidth consumption.

As technology and user requirements continue to drive the expectations for connectivity, how can you ensure you have access to the capacity required to keep pace with growing demand?

Intelsat’s robust maritime solutions have been designed to support the demands of your most complex mobility applications. You can increase your operational efficiencies as well as access a wide portfolio of products to provide constant connectivity on board ship. Whether you build and maintain your own networks and only require space capacity or are looking for a fully managed solution, Intelsat provides you with optimum solutions for coverage, throughput, service delivery and economics.

Access Bandwidth When and Where It Is Needed

At Intelsat, we believe in enabling connectivity anywhere in the world. Our powerful C- and Ku-band global mobility beams provide you with always-on broadband connectivity that rivals any land-based networks. Automatic beam switching (ABS) allows for seamless transfer from one satellite to another while maintaining connectivity with continuous provisioning of the service.

Designed as an overlay to the existing networks, the Intelsat EpicNG platform uses focused spot beams in key maritime routes to meet your high throughput and performance needs. Intelsat EpicNG’s open architecture and backward compatibility provides you with improved performance over your existing hardware or the ability to customize your technology based on the application. It is also forward compatible with the next generation of lightweight, low-profile phased array antennas that Intelsat is developing with its partners.

Leverage IntelsatOne® for Your Global Infrastructure or to Fill the Gaps in Your Existing Infrastructure

In addition to satellite connectivity, you can leverage Intelsat’s infrastructure to provide a range of managed services from teleport and hub operations to full end-to-end service. The IntelsatOne terrestrial network operates seamlessly with our satellite technology to support hybrid satellite and fiber connectivity, with access to multiple platforms and teleports. Our managed services simplify satellite-based communications, reduce network operations costs, and deliver the flexibility and support to meet your changing requirements.

Ensure Access to HTS Technology Wherever Your Customers Travel with IntelsatOne Flex for Maritime

IntelsatOne Flex for Maritime is a customizable wholesale Mbps service aggregates Intelsat’s prime space segment, the IntelsatOne terrestrial network and the HTS-optimized iDirect Velocity® platform, into a simplified unified ecosystem. With IntelsatOne Flex, you can access bandwidth when and where it is needed without increasing capital expenditures for new capacity, infrastructure expansion and management.

Features include:

- Enterprise-grade, wholesale Mbps service, with tiered plans to meet the Committed Information Rate (CIR) requirements of the service provider
- Service providers using IntelsatOne Flex can customize, contend, prioritize and shape their bandwidth for their end-customer market segments
- Flexible operational environment allows services providers to easily scale services to meet surge requirements or geographic additions
- Ability to leverage wide beams for broadcast applications to the aircraft or vessel, and spot beams for high throughput data

Global Maritime C-band Coverage Platform

Our multi-layered C-band global coverage provides reliable connectivity around the world, rain or shine
Intelsat operates the world’s first Globalized Network, delivering high-quality, cost-effective video and broadband services anywhere in the world.
