

Bridging the Connectivity Gap to a Better World

Today, around 600 million people live in areas without access to mobile broadband coverage, most often the only means to connect to the internet. Mobile network operators, although eager to meet connectivity needs, face significant challenges in building out mobile network infrastructure in rural and hard-to-reach areas.

Unserved Communities Worldwide

Why Terrestrial Backhaul Alone Isn't Enough

Cost

Running fiber or microwave backhaul infrastructure over long distances (and challenging terrain) is cost-prohibitive.

ARPU in rural communities makes it difficult to recover investment.

Small population density and low

Time

Building out terrestrial backhaul infrastructure over long distances can take months, a year, or even longer.

Achieve More with Mobile Backhaul via Satellite

6 Reasons to Include Satellite Backhaul in Network Planning Strategies

(((o))) 1. Cost-efficient Backhaul

Advanced satellite technologies means bandwidth can be cost-effectively distributed dynamically to hundreds—even thousands of sites using smaller antennas.

2. Worldwide Coverage

Extend coverage to more users and things. Intelsat's fleet of geostationary satellites cover 99% of the world's populated areas.

3. Network Continuity

When network outages occur from damage to terrestrial backhaul, satellite backhaul can be used to keep users connected everywhere they live, work, and play.

4. Faster Deployment

Building out mobile coverage into rural and hard-toreach areas using terrestrial backhaul takes time. Why wait? Quickly connect rural sites with satellite backhaul.

5. Fiber-like Connectivity Advancements in satellite

hub and modem technologies utilize forward error correction, TCP acceleration, and caching to support the best user experience possible.

6. Professional Services A full suite of professional

services meet the unique planning and implementation needs of every customer.

Welcome to a new world of greater connected possibilities with satellite-powered mobile backhaul.
